

About Me

Product-oriented technical leader with 5+ years of experience building and delivering ML, CV, GenAI, and agentic AI platforms across start-up & enterprise environments. Currently a Team Lead in Data Science at UPL, operating as de facto Product Manager and People Manager—owning problem discovery, PRDs/user stories, success metrics, MVP scope, roadmaps, prioritisation, launch & iteration, cross-functional execution, adoption, and team leadership. Strong hands-on engineering background enables confident technical decision-making and effective collaboration with engineering teams. Seeking Senior PM / Technical PM / AI PM / Platform PM roles.

Core Product & Leadership Skills

Product Strategy & Vision • Roadmaps & Prioritisation • PRDs & User Stories • OKRs, Metrics & Adoption • MVP Definition • Agile / Sprint Planning • Stakeholder Management • Platform & Ecosystem Thinking • Product Analytics • People Management & Conflict Resolution • Risk, Compliance & Governance • Technical Trade-offs & System Design

Technical Skills

GenAI/RAG: Azure OpenAI, RAG with citations, grounding, prompt design, evaluation patterns, LLMs
Agentic AI: Google ADK, AutoGen, Crew AI, agent orchestration, sub-agents, tool calling, multi-step workflows
MLOps: MLflow, Airflow, Automation
OCR/Docs: Azure Document Intelligence, extraction + LLM validation, PyMuPDF4LLM
Cloud & Platforms: Azure OpenAI, Azure AI Search, Databricks, Snowflake, AWS S3, Azure Storage, GCP, SQL
Core Frameworks: Python, FastAPI, GitHub, Numpy, Pandas, Scikit-learn, Tensorflow, Keras, H2O, Plotly, PyTorch, PySpark, MongoDB, Postgres, Docker, Selenium, BeautifulSoup
Misc.: Deep Learning, Machine Learning, Computer Vision, Statistical Analysis, Processing Large Datasets, Data Visualization

Awards

- UPL CDT Shining Star Award 2025
- Most Innovative Project Award 2025

VIBHUTI SHARMA

Data Scientist (Team Lead) | Product Owner for AI Products

+91 9816241413 vibhutisharma111@gmail.com in/vibhutisharmaa

PROFESSIONAL EXPERIENCE

UPL Ltd — Data Scientist (Team Lead) | Product Owner for AI Products

Mar 24 - Present

Leading a team of 6 data scientists delivering multiple ML, GenAI products end-to-end, operating as de facto Product Manager. Owned problem discovery, solution design, prioritisation, hands-on development, delivery, adoption, and team execution, collaborating closely with Product, Data Engineering, App Development, Software Engineering, Legal, Regulatory, Procurement, HR, Sales, Marketing, and Senior Leadership.

UPL Genie – Enterprise GenAI Platform

- Defined product vision, MVP, and roadmap for UPL Genie, a secure enterprise GenAI platform built to meet strict compliance and data-isolation requirements.
- Led and hands-on developed the platform, positioning it as the umbrella layer for all internal AI applications.
- Delivered multi-model GenAI capabilities (GPT variants, Grok, DeepSeek, Stable Diffusion) with auto model selection.
- Built core enterprise capabilities including document upload with RAG, web search integration, and persistent chat history with session management.
- Introduced agentic AI capabilities for workflow orchestration and advanced use cases, including chat-with-Excel, enabling users to query datasets conversationally like a data analyst.
- Designed, built, and rolled out platform RBAC, breaking down work into sprint-ready tasks and aligning teams on access rules for apps/features/data.
- Used adoption and usage analytics to reprioritise the roadmap toward high-impact capabilities, improving platform focus and value.
- Positioned Genie as the foundation for future AI and agent-based enterprise workflows.

Tech: Azure OpenAI, Google ADK, Python, FastAPI, RAG pipelines, Excel ingestion/parsing, web search integration, Azure AI Search, Postgres

Regulatory Dossier Generation — Flagship GenAI Product

- Owned end-to-end product delivery for automated regulatory dossier generation used prior to country-wise filings.
- Partnered closely with country regulatory teams, aligning daily on requirements, priorities, and rollout readiness.
- Drove country onboarding strategy, prioritising high-impact and faster-approval countries to meet annual targets and demonstrate early wins.
- Reduced dossier preparation from ~15 days to a three-click automated workflow.
- Established delivery governance using a central tracker to monitor progress, dependencies, and bottlenecks; proactively flagged risks and delays.
- Optimised delivery velocity by delegating validation tasks to tester and recommending additional regulatory resourcing to remove single-owner bottlenecks.
- Designed and led development of end-to-end GenAI dossier pipelines, including extraction and structuring of unstructured regulatory documents, RAG-based grounding using FAISS and backend orchestration using Python, FastAPI, and Databricks pipelines.
- Award: Most Innovative Project 2025

Tech: GenAI extraction, FAISS, RAG, Python, MailMerge, FastAPI, Databricks

ChatNPP — Sales & Marketing Enablement

- Identified fragmented product knowledge as a key sales and distributor pain point.
- Built a citation-backed GenAI assistant over PDFs, PPTs, and videos for NPP products.
- Owned requirements, sprint planning, delivery, rollout, and adoption tracking.
- Rolled out across 4 countries, with expansion underway.
- Identified opportunity to drive incremental sales, proposing a product recommendation capability based on historical sales data; currently initiating development.

LegalAI & HRBot — Internal Knowledge Assistants

- LegalAI: Inherited a non-performing GenAI assistant; diagnosed gaps in retrieval quality and workflows, rebuilt the solution end-to-end in partnership with Legal SMEs, and delivered a compliance-aligned, reliable contract-query experience.
- HRBot: Defined and built an internal HR assistant for policy and process queries, improving employee self-service and reducing manual HR support load through iterative stakeholder feedback.

Certifications/ Courses

- **Digital Product Management** (2025)
 - University of Virginia (Coursera)
- **AI Product Management** (2025)
 - Duke University (Coursera)
- **Optimization for Data Science.** (2021)
 - IIT Jodhpur
- **Artificial Intelligence.** (2021)
 - IIT Jodhpur
- **Machine Learning** (2021)
 - IIT Jodhpur

Education

- MTECH**
(COMPUTER SCIENCE ENGINEERING)
- DTU Delhi (formerly, Delhi College of Engineering)
- BTECH**
(COMPUTER SCIENCE ENGINEERING)
- JUIT Wajnaghat

Achievements

- Scored **98.75 percentile in GATE** (Computer Science Engineering)
- **MHRD Scholarship recipient**-2 years
- Selected as Junior Research Fellow (**JRF**), IIT Jodhpur
- **Journal Publication:** Tweet Recommender Model using ANFIS, Future Generation Computer Systems (Elsevier, IF 7.2) (<https://doi.org/10.1016/j.future.2020.04.001>)

Hobbies

Avid reader and writer; endurance running – currently training for a half marathon.

OCR + Invoice Processing (Document AI)

- Built OCR pipelines for processing submitted invoices and extracting structured data.
 - Reduced manual processing effort and improved downstream finance accuracy.
- Tech:** Azure Document Intelligence, GPT-4o post-processing, Python APIs

Demand Forecasting Automation – MLOps

- Productised a global monthly forecasting workflow that was previously manual and region-heavy.
 - **Reduced effort from 4 data scientists to an automated pipeline with review-only effort.**
 - Led and mentored an intern; **developed automation, scheduling, and monitoring pipelines.**
- Tech:** Airflow DAGs, Azure jobs, MLflow, Python

Customer Risk Assessment

- Addressed cash-flow issues caused by high credit exposure in a **distributor-driven business.**
 - Defined “good vs bad customer” criteria incorporating sales, overdues, returns, and external factors.
 - Acted as **IC + product owner**, working directly with McKinsey and business stakeholders.
- Tech:** Python, classification models, ML, feature engineering

Agentic AI (Leadership & Procurement)

- **Owned problem discovery and product design** for agentic AI tools used by senior leadership and procurement heads, partnering closely with domain SMEs.
- **GMT Assistant:** Delivered an agentic assistant that generates **answers along with discussion points** for executive reviews, iteratively refined through leadership feedback.
- **Procurement Assistant:** Designed **multi-agent workflows** enabling conversational access to spend, vendors, and contracts, aligned to real procurement decision flows.
- Set **clear expectations and guardrails** on agent capabilities while driving adoption through iterative demos and refinements

People Leadership & Team Management

- **Line-manage a team of 6 data scientists:** regular 1:1s, workload planning, code reviews, mentoring, conflict resolution, KTs, and team building.
- Own documentation standards for all features and platforms.
- **Proactively resolved team conflicts**, ensuring continuity and focus on delivery.
- Conducted 50+ interviews across lateral and campus hiring; mentored interns with multiple PPO conversions.
- Award: **UPL Shining Star Award** – sole recipient **across the Center for Digital Transformation.**

EXL – Data Scientist | Analytics Consultant

Feb 23 – Mar 24

- Developed claims **coverage predictive model** to optimize coverage decisions for a top US insurer, achieving a **10% reduction in overwrite costs, 13% improvement in decision accuracy, a 25% decrease in adjuster processing time, and an 18% reduction in false alerts.**
- Transformed business & technical **model monitoring** for a leading US insurer, **automating inter HTML reports for various models. Achieved ~70% faster report generation**, ensuring seamless tracking of key KPIs.

GoMechanic – Data Scientist

Dec 21 – Feb 23

- Insurance Claim Prediction Model for Damaged Vehicles: Built & annotated multiple datasets of 7000+ images to facilitate accurate model training. Designed and implemented multiple Computer Vision models to tackle distinct challenges, including Car Orientation Detection, Car Color Detection, Car Part Detection, and Damage Type Detection. Utilized state- of-the-art algorithms such as EfficientNet, Yolact, and K-means clustering.
- Automated handwritten garage bill processing, enhancing workflow efficiency and service detail accuracy for company representatives. Implemented YOLOv5 for table identification, EasyOCR for text extraction, TextBlob for spelling correction, and RapidFuzz for efficient service matching, showcasing a blend of Object detection and NLP technologies.
- Product Image Foreground Segmentation and Extraction: Performed image processing on 3000+ images to generate alpha mattes. Built, trained, and deployed the models based on U2-Net & IS-Net architecture.
- Developed a dynamic car insurance analysis feature to boost user engagement on our app. Enabled users to effortlessly extract pertinent details from uploaded car insurance policy PDFs. Utilized Object Detection and custom-trained EasyOCR model, eliminating the need for manual reading.

IIT Jodhpur – Junior Research Fellow

2021

Implemented **Neural Architecture Search** to discover the optimal CNN architecture for a given dataset, achieving a successful balance between accuracy and parameter count using a **Genetic Algorithm**-based search algorithm.

Infosys – Engineer Trainee

Built early foundation in software delivery, SDLC discipline, and cross-team execution in an enterprise environment.
