DATA SCIENTIST

Preetibhadauria03@gmail.com | github.com/preeti-bhadauria | linkedin.com/in/preeti-bhadauria-32ba10146/ | +91-8287682738

SUMMARY

Experience in analytics and hands-on machine learning projects, including CNN-based image classification, LSTM sequence modeling, and recommendation systems. Strong in Python, SQL, and translating business problems into data-driven solutions.

Technical Skills

- Python, SQL
 - Exploratory Data Analysis
 - Orange Data Mining
- Pandas, NumPy
 - Scikit-learn, TensorFlow, Keras
 - Matplotlib, Seaborn
- Data Visualization:

 - Tableau
 - Power BI

Projects

CNN-Based Image Classification System Present

- Built a Convolutional Neural Network (CNN) to classify images into multiple categories using a custom image dataset.
- Implemented data preprocessing including resizing, normalization, and train-validation splitting to improve model stability.
- Achieved ~90%+ validation accuracy on a limited dataset by optimizing convolution layers, pooling, and dropout regularization.
- Applied model tuning and augmentation strategies to enhance generalization on unseen data.

Sequence Generation using LSTM (NLP Project) Present

- Developed a sequence prediction model using LSTM networks to generate meaningful text sequences from public-domain book data "A Room with a view"
- Performed text preprocessing including tokenization, sequence padding, and vocabulary indexing.
- Designed an Embedding + LSTM architecture to capture contextual and sequential patterns in text data
- Improved model coherence by tuning embedding size, sequence length, and number of LSTM units.

Product Recommendation System – Child Nutrition & Deficiency Analysis Jan2025

- Designed a nutrition-focused product recommendation system using children’s health and dietary deficiency data to suggest appropriate food supplements and nutrition products.
- Analyzed key deficiency indicators such as iron, protein, vitamin A, calcium, and BMI-for-age to profile nutritional gaps.
- Performed data cleaning and feature engineering to handle missing records, normalize
- Built a content-based recommendation model that matches children’s nutritional needs with supplement products.

Work Experience

HDFC BANL LTD Mar 24-Oct24

- Manager
- Cleaned and analyzed large-scale transactional and customer datasets using Python (Pandas, NumPy) and SQL.
 - Built classification models to identify high-risk vs low-risk customer segments for lending and cross-sell use cases.
 - Conducted exploratory data analysis (EDA) to uncover trends in customer behavior, repayment patterns, and product usage.

ICICI Bank Ltd

- Product owner-Deputy Manager
- Owned end-to-end product lifecycle for banking products, from requirement gathering to delivery and post-launch optimization.
 - Collaborated with business, technology, analytics, and compliance teams to define product vision, roadmap, and priorities.

Education

MBA 2017-2019

- GGSIPIU
- Finance & Marketing

- BBA
- GGSIPIU
- Computer Aided Management

Certifications

- **Certificate program in Data science machine learning generative AI (IIT-D)** 2025-2026
- **Executive Program in Business Analytics (IIM -C)** 2023-2024
